

# 100W portable power bank usage

## Overview

---

Understanding how to use a 100 watt hour power bank is surprisingly simple. Most have multiple output ports (USB-A, USB-C, sometimes even DC) and a power button. Just plug in your device, hit the button, and you're charging!. The AFERIY Nano100 is one example: it uses a lithium iron phosphate battery, which is safer than common cells and lasts longer, too. It is also small enough to slip into a backpack, and since it's under the airline limit, you can even carry it onto a plane. Enter the best 100 watt power banks—powerhouses that not only meet the needs of smartphones and tablets but also support larger devices like laptops, ensuring you're always connected, no matter where life takes you.
