

Air energy storage and lithium battery energy storage

Overview

Lithium-air batteries hold more energy than regular lithium-ion batteries. This makes them great for electric cars and storing renewable energy. Upon discharge and charge. Air Energy is a participant in cohort 2 of Resurgence, a cleantech accelerator led by the University of Chicago's Polsky Center for Entrepreneurship and Innovation in partnership with the UChicago Pritzker School of Molecular Engineering. Air Energy was founded following a groundbreaking. A new model developed by an MIT-led team shows that liquid air energy storage could be the lowest-cost option for ensuring a continuous supply of power on a future grid dominated by carbon-free but intermittent sources of electricity.
