

# Base station power supply and ordinary power supply

## Overview

---

Basic power supplies will change the voltage and convert to DC power. These standard operations send unregulated voltage out of the power supply. 9 V) at high current from compact. To understand how, consider the power amplifier (PA) and power supply unit (PSU) in the 5G New Radio (NR) gNodeB base station. In 2G, 3G and 4G, the PA and PSU were separate components, each with its own heatsink. It often features auxiliary power supply mechanisms that guarantee operation in case of lost or interrupted electricity, during blackouts. This expansion is primarily driven by the accelerating deployment of 5G networks globally. Tech ttery chargers, and distribution equipment.
