

# Can cables be laid under photovoltaic panels

## Overview

---

Use UV-rated cable clips to attach wires under the solar panel racking. Secure junction boxes with waterproof seals. The wires carry high voltage, often across exposed areas like rooftops, exterior walls, or open fields. Sometimes they even stray into. Issues with DC-string cabling (wiring) on solar photovoltaic (PV) systems are emerging as a significant area of concern related to system failures, underperformance, and safety issues. The SolarGrade PV Health Report, produced by a large solar PV inspection company, Heliovolta, compiled 60,000. PV wire doesn't seem like a big deal, but moving generated power from solar panels to the electrical grid would be impossible without it. To the untrained eye, installing thousands of feet of wire seems like a pretty straightforward process. Analysis: The solar panel cable must be correctly sized to handle the maximum current (amps) produced by your array while minimizing voltage drop.
