I've got some 36v eBike batteries that I picked up for a fantastic. If they physically fit, you could do three 24V batteries at the same AH rating. It achieves this by switching a transistor on and off at high frequency, controlling the amount of energy transferred to the output load. Buck converters are popular because of their high. Is there a charger that can handle the 2400w in at 12v or an all in one that I can put my batteries to 24v and handle the power in?

Can your inverter operate at 24V?

If so finding a SCC that can handle 2400W will be feasible, for example Epever have 100A models with either 150 Voc or 200 Voc input.
