

China installs solar power generation for home use

Overview

Global solar installations are breaking records again in 2025. In H1 2025, the world added 380 gigawatts (GW) of new solar capacity - a staggering 64% jump compared to the same period in 2024, when 232 GW came online. For. The country is installing solar, building EVs, and investing across energy at a rapid clip. It's pouring hundreds of billions of dollars into putting renewable sources like wind and solar on its grid, manufacturing millions. Wind and solar surpassed a quarter of China's electricity generation for the first time in April 2025. China is the largest market in the world for both photovoltaics (PV) and solar thermal energy. Its PV capacity crossed 1,000 gigawatt (one terawatt, 1 TW) in May 2025. Rapid solar capacity expansion overwhelms the grid, PV manufacturers compete for market shares, and then large target markets slap import tariffs on Chinese PV products, taking off their competitive edge.

China installs solar power generation for home use

Solar power in China

In June 2024, China activated the world's largest solar power facility, a 3.5-gigawatt (GW) installation in Urumqi, Xinjiang. Built by Power Construction Corporation of China, this plant produces around 6.09 ...

Solar energy in China

So there is a lot of uncertainty in the Chinese solar industry, but there are also irrefutable facts: China needs to continue to expand domestic solar capacity to reach its climate target .

China Solar and Wind Installations Break More World Records

China is leading the world in new solar and wind installations and doing so at a record-shattering pace. In May 2025 alone, the country added 93 gigawatts of solar capacity, or nearly 100 ...

China's energy dominance in three charts

China is on an absolute tear installing wind and solar power. The country reached nearly 900 gigawatts of installed capacity for solar at the end of 2024, and the rapid pace of building has

China continues to lead the world in wind and solar, with twice as ...

However, China still needs to turn the massive renewables buildup into power generation, replace fossil fuels, and reach the "tipping point" so as to peak its carbon emissions as early as ...

Solar power in China

OverviewHistorySolar resourcesSolar photovoltaicsConcentrated solar powerSolar water heatingEffects on the global solar power industryGovernment incentives

Photovoltaic research in China began in 1958 with the development of China's first piece of monocrystalline silicon. Research continued with the development of solar cells for space satellites in 1968. The Institute of Semiconductors of the Chinese Academy of Sciences led this research for a year, stopping after batteries failed to operate.

Other research institutions continued the development and research of sola...

Wind and solar generate over a quarter of China's electricity for the

China achieved a new milestone in its energy transition, with wind and solar power together generating a quarter (26%) of the country's electricity in April 2025, the highest monthly ...

China's wind, solar capacity exceeds thermal power for first time

It set a goal to raise wind and solar capacity to 1,200 GW by 2030, and met the target six years early last year. Campaigners have urged Beijing to double the target. Grid access remains a

Digging into China's solar capacity numbers

Residential PV in China saw a significant decline in 2024. According to the NEA, only 6.9 GW of residential PV capacity was added in the first quarter of 2024, down 23% from the first quarter

China installs record capacity for solar (+45%) and wind (+18%) in 2024

According to China's National Energy Administration (NEA), the country's installed capacity increased by 14.6% in 2024, surpassing 3,348 GW. Solar capacity surged by a record ...

H1 2025: China installs more solar than rest of the ...

This year, the milestone was achieved in June. That pace cements solar as the fastest-growing source of new electricity generation worldwide.
