

Coal to Solar Power Generation

Overview

An innovative approach gaining traction is the conversion of decommissioned coal mines into solar energy farms. This strategy not only addresses the challenges of land availability for renewable energy projects but also contributes to environmental remediation and economic. Electricity generation by the U. electric power sector totaled about 4,260 billion kilowatthours (BkWh) in 2025. In our latest Short-Term Energy Outlook (STEO), we expect U. 6% in 2027, when it reaches an annual total of 4,423 BkWh.
