

Dark current of solar panels

Overview

Dark current is composed of reverse saturation current, thin-layer leakage current, and bulk leakage current, represented by J_{1J1} , J_{2J2} , and J_{3J3} , respectively. · Region 1: Dominated by J_{2J2} (thin-layer leakage current). These currents have varying degrees of impact on the power output of solar modules. Dark current (DarkCurrent), also known as unilluminated current, refers. To understand how to read the dark current of solar cells, one must consider the following points: 1. Under illumination, small fluctuations in the light intensity add considerable noise.
