Below, affected ISO New England (ISO-NE) participants can learn more about changes to existing systems and procedures related to the Day-Ahead Ancillary Services Initiative (DASI). This project is one of several that ISO-NE has undertaken, in collaboration with stakeholders, for the continued. ISO-NE loves using acronyms for new rules they adopt. power generation for the next two years. As a result of new solar projects coming on line this year, we forecast that U. It involves using wind turbines to convert the turning motion of blades, pushed by moving air (kinetic energy) into electrical energy (electricity). These shifts aim to improve grid reliability and encourage cleaner energy sources, but they come with cost implications that can directly affect the.
