WASHINGTON — Today, U. Secretary of the Interior Doug Burgum signed a Secretary's Order to more efficiently manage our nation's energy resources by permitting projects that optimize energy generation while minimizing their environmental impact. Massive, unreliable energy projects, such as wind. The United States may permit and regulate offshore wind energy development within the areas under its jurisdiction. The federal government and coastal states each have roles in the permitting process, and those roles depend on whether the project is located in state or federal waters. Utility-scale wind turbines are mounted on towers, some 300 feet or taller. At those heights, the wind is faster and less turbulent.
