

EPC general contracting for solar distributed power stations

Overview

Under the EPC model, a single contractor handles every aspect of the project, from initial site assessment and system design to procurement of materials and equipment, as well as the final installation and commissioning of the solar power system. 1 Under an EPC Contract, a Contractor is obliged to deliver a complete facility to the Project Company. The Project Company needs only to turn a key to start. The term Solar EPC represents a model where one company, known as the EPC contractor, is responsible for managing the entire process of a solar energy project. When you are designing a solar project, whether a rooftop array at your factory, a 1-5 MW ground-mounted system, or a utility-scale park, you will encounter one term: EPC. It stands for Engineering, Procurement, and Construction.

EPC general contracting for solar distributed power stations

Solar EPC (Engineering, Procurement, and Construction)

Solar EPC stands for Engineering, Procurement, and Construction in the solar industry. It is a comprehensive approach to developing solar projects from start to finish. EPC companies are ...

EPC in Solar -- What EPC Contractors Do and Why They Matter

What Is an EPC in Solar? An EPC is a specialized organization contracted to fully deliver a solar PV project--from concept to completion. EPCs handle: They ensure the solar project is properly ...
