

Electric power supply for communication base stations

Overview

To address these challenges, a robust power supply scheme has been developed using Pulse Frequency Modulation (PFM), isolated AC-DC converters, and Zero Voltage Switching (ZVS) regulators. Telecom power supply systems form the backbone of modern telecommunications. Without them, communication services would falter during power outages or fluctuations. A power efficient. When natural disasters cut off power grids, when extreme weather threatens power supply safety, our communication backup power system with intelligent charge/discharge management and military-grade protection becomes the "second lifeline" for base station equipment.
