

# Electricity policy denmark

## Overview

---

The relevant legislation in Denmark in the energy sector is: Danish Electricity Supply Act (Elforsyningsloven): Updated in 2024 The 2024 version focuses on reinforcing electricity supply security, including producer responsibilities for contributing to grid expansion. The Danish Energy Agency is responsible for ensuring a secure and green energy supply — affordable and shared by all. Technical assessment of how Denmark's greenhouse gas emissions, as well as Denmark's energy consumption and production will evolve over the period up to 2035 based on the assumption. Denmark has been an early leader in decarbonisation and in 2022 the government announced a net zero by 2045 target, aiming at 110% emissions reductions by 2050. Denmark's technology leadership is important in the areas of offshore wind, biomethane and district heating. The government has expanded. The IEA examines the full spectrum of energy issues including oil, gas and coal supply and demand, renewable energy technologies, electricity markets, energy efficiency, access to energy, demand side management and much more. Through its work, the IEA advocates policies that will enhance the. Denmark's power sector has undergone a transformational shift over the past 30 years from coal-dominated generation to mostly renewable sources. Power generation from renewable sources rose nearly 30-fold from 1990 to 2020, from 3% of the generation mix to more than 80%. This has mostly been due to. irst oil crisis in 1973. Over the years, numerous actions have been taken on the basis of a broad consensus in the Danish Parliament – both in order to reduce the energy consumption and in order to increase the s ate and the environment.
