## Overview

---

Explore ESS's guide to Air, Liquid, Refrigerant, and Immersion cooling strategies and learn how to select the best fit for your battery pack design. In this study, I propose and numerically evaluate a novel bidirectional counter-flow heat exchange plate design specifically aimed at addressing the thermal management challenges of a battery energy storage system under high-rate and ultra-high-rate operations. It typically uses forced airflow, generated by fans, to dissipate heat from the battery pack.
