

Energy storage for peak shaving bissau

Overview

We believe solar + battery energy storage is the best way to peak shave. Other methods – diesel generators, manually turning off equipment, etc. – all present significant downsides. In an era of rising electricity costs, unpredictable peak demand charges, and growing pressure for energy independence, peak shaving energy storage is no longer. Peak shaving, or load shedding, is a strategy for eliminating demand spikes by reducing electricity consumption through battery energy storage systems or other means. Energy and facility managers will gain valuable insights into how peak shaving applications can help unlock the full potential of energy storage systems. What Are Demand Charges?

Demand charges are expensive. Not all utility. Peak shaving energy storage helps businesses save money by storing electricity when it's cheap and using it when prices are high.
