

# Energy storage lithium battery fast charging

## Overview

---

In 2017, the US Department of Energy defined extreme fast charging (XFC), aiming to charge 80% battery capacity within 10 minutes or at 400 kW. The aim of this. Traditional lithium-ion batteries use a graphite anode with a storage capacity of 372 mAh/g. Storage capacity is limited by the number of lithium ions that can fit between the graphite layers.
