

Generator cooling air area

Overview

This calculator adds combustion air to the total cooling requirement. Calculate required airflow (CFM) and louver sizes for generator rooms, sheds, and enclosures to prevent overheating. Most electrical and robust operation. 5x - 2x) depending on blade. Air cooled unit draws cooling air from different ends of the unit to cool the system, dependent upon the units cooling system design. Open packages are usually installed inside a buildin or beneath a canopied structure to protect them from the elements.
