

Hotel room energy saving system

Overview

Key approaches include smart HVAC systems, LED lighting, optimized water heating, energy management systems, improved insulation, guest participation programs, and renewable energy investments. Reducing your hotel's energy usage isn't just an environmentally friendly trend; more efficient energy use can lead to material cost savings for hotels of all shapes and sizes. But the challenge lies in curbing energy consumption in a way that doesn't compromise the guest experience or your staff's. Hotels can significantly reduce energy consumption and operational costs by implementing strategic efficiency measures. This also helps to improve their brand image and draw in guests who care about the environment. By using these new solutions, hotels can cut costs. Key drivers of energy consumption in hotels include:

- Room HVAC systems: Heating and cooling often run regardless of occupancy due to decentralized systems or lack of automation.
- Domestic hot water: Used extensively for showers, kitchens, laundry, and cleaning services.

Hotel room energy saving system

Smart energy saving solution for hotels / Savor

Rooms often remain energized as long as a guest leaves the card on the device. Savor (patented occupancy detection technology) helps hoteliers reach their sustainability goals. With Savor, eco ...
