Sodium-ion batteries are entering commercial production with 20% lower costs than LFP, flow batteries are demonstrating 10,000+ cycle capabilities for long-duration applications, and emerging technologies like iron-air batteries promise 100+ hours of storage at costs competitive. Sodium-ion batteries are entering commercial production with 20% lower costs than LFP, flow batteries are demonstrating 10,000+ cycle capabilities for long-duration applications, and emerging technologies like iron-air batteries promise 100+ hours of storage at costs competitive. From iron-air batteries to molten salt storage, a new wave of energy storage innovation is unlocking long-duration, low-cost resilience for tomorrow's grid. In response to rising demand and the challenges renewables have added to grid balancing efforts, the power industry has seen an uptick in. The EU Batteries Regulation came into force in 2023, but its various stipulations become law over the next several years. After a historic 2025, when global BESS capacity surpassed 250 GW and overtook pumped hydropower, momentum is set to accelerate in 2026. Key markets are expanding, emerging regions are stepping into the. Delivered quarterly, the US Energy Storage Monitor from the American Clean Power Association (ACP) and Wood Mackenzie Power & Renewables provides the clean power industry with exclusive insights through comprehensive research on energy storage markets, deployments, policies, regulations and.
