## Overview

---

The right size depends on three simple things: what devices you want to power, how long you need them to run, and where you'll use the station. Most people need a 500-1000 watt-hour unit for camping and small emergencies, while home backup typically requires 1500-3000 watt-hours or. A Complete Guide You've probably found yourself staring at rows of portable power stations, wondering which one is right for you. With capacities ranging from 200Wh to over 5000Wh and power outputs from 300W to 4000W, the choices can be overwhelming. This is how batteries are rated. Here's a quick cheat. When we say power packs, we're referring to the full package units that can be charged by your wall (120 volts AC) or by 12V DC solar panel or car input, and can deliver power to you as 120V AC or direct to your small power electronic devices with USB-A and USB-C jacks. Imagine being halfway through a camping trip when your fridge and phone die, or losing work during a blackout because your laptop battery drained. Portable power stations prevent these disasters, but.
