## Overview

---

For a typical 5 kW residential system the average cost is between \$2.50 per watt, the homeowner is looking at the higher end of that price range of \$12,000 to \$17,500 while a larger system of 10 kW system falls on the lower end of \$24,000 and \$35,000. This guide provides a comprehensive overview of solar photovoltaic system costs in Canada, including factors influencing prices, regional variations, installation expenses and available incentives. The total price is a sum of several parts, each important for a safe and efficient power system. The average. The solar panel cost typically represents about 15-25% of the total system price. Inverters account for another 10-15%, while the remaining 60-75% is allocated to hardware, labour, permitting, and other soft costs. It is this holistic view that provides a realistic picture of the investment. In this post, we'll unpack every line item in your residential solar PV quote, so you can budget with confidence and avoid surprises down the road. Here's what that looks like in real numbers: Pro Tip: Prices vary by panel brand.
