

# How much does an outdoor wind power base station cost in Somalia

## Overview

---

Somalia has higher tariffs than neighboring countries Kenya and Ethiopia, ranging from 50-125 cents/kWh compared to 0. What is interesting is that thanks to a strong Somali current called the Somali jet, Wind energy produces more at night when Solar is obsolete. How much would Solar cost per state 2. How much would Wind cost per state Explore how refurbished wind turbines compare to new ones in terms of LCOE. Somalia has an installed capacity of approximately 400 MW, with roughly 300 MW coming from diesel and 100 MW from solar and wind power. Around 80 percent of Somalia's urban population, and just 24 percent of its rural communities, have access to electricity, according to data from the World Bank. Strong demand for affordable electricity: The need for cheaper and reliable electricity throughout Somalia is high and growing, as evidenced by the expansion of independent power providers and the establishment of microgrids in a growing number of cities. Overall, the total installed and operational. As early as 2013, a working paper by the African Development Bank highlighted research showing that Somalia had more “on-shore wind potential” than 21 other countries in Africa, including Algeria, Egypt, Libya, Mauritania, Morocco, and Tunisia. According to a factsheet prepared by the United States.
