

# How to calculate how many photovoltaic panels can be installed on the roof

## Overview

---

You can calculate how many solar panels you need by dividing your yearly electricity usage by your area's production ratio and then dividing that number by the power output of your solar panels. To put it simply:  $\text{Number of panels} = \text{annual electricity usage} / \text{production ratio} / \text{panel wattage}$ . So, the number of panels you need to power a house varies based on three main factors: In this article, we'll show you how to manually calculate how many panels you'll need to power your home. The article outlines a step-by-step approach that includes calculating annual energy usage.
