

How to debug the photovoltaic bracket installation

Overview

Debugging solar photovoltaic systems involves a systematic approach to identify and rectify issues affecting performance. Fully understand the system's components, 2. Conduct visual inspections regularly, 4. Review system performance. 1, Determine the installation location: First, you need to determine the installation location of the solar mounting bracket, usually on a flat roof or on the ground. At the same time there is the control of the inverter of the photovoltaic frame molding machine, is also the object of understanding. If there is more convenient and feasible method to fix the solar panel.
