An intelligent operation and maintenance ss system & intelligent operation & maintenance?

The interface between the power supply business system and the power supply system intelligent operation and maintenance platform should have integrity. Base stations are the key energy consumers on any mobile network; their monitoring and upgrade are essential if operators are to compete. Statistics from within the industry indicate that 65 percent of communications interruptions are caused by power supply failures, with 85 percent of them. Finding the law of base station power system failure, seeking fast and effective fault solutions, improving the maintenance efficiency of communication base stations, and improving the quality of communication networks have become urgent problems to be solved by the operation and maintenance. When power base stations fail, entire cities can go dark – literally. The International Energy Agency reports that poorly maintained stations account for \$9. 2 billion in annual economic losses globally.
