

Introduction to the US energy storage fire protection system

Overview

This whitepaper provides a technical overview of energy storage system safety, focusing on how the International Fire Code (IFC) and NFPA 855, Standard for the Installation of Stationary Energy Storage Systems, approach regulation, hazard mitigation, and enforcement. NFPA is keeping pace with the surge in energy storage and solar technology by undertaking initiatives including training, standards development, and research so that various stakeholders can safely embrace renewable energy sources and respond if potential new hazards arise. NFPA Standards that. An ESS is a device or group of devices assembled together, capable of storing energy in order to supply electrical energy at a later time. Battery ESS are the most common type of new installation and are the focus of this fact sheet. While BESS technology is designed to bolster grid reliability, lithium battery fires at some. This is where the National Fire Protection Association (NFPA) 855 comes in.
