

# Inverter high voltage protection setting

 LFP 12V 100Ah

## Overview

---

The inverter can be set to the following modes for voltage faults: Full Dynamic Support – Reactive current feed in, Partial Dynamic Support – Active and reactive current feed in is blocked during the fault and Disable (FRT off) – Inverter will trip on any disturbance. To set output voltage of inverter - This is normally 230 Vac. - The ground relay is useful when an earth-leakage circuit-breaker is part of the. In this video, I explain how to manage high and low voltage in the SOLIS Hybrid Inverter effectively. Additional specification of ride through needed to insure that DER remains online during these excursions. Today's PV and energy storage inverters can be deployed individually and in a mixed design affording plant designers' options for energy capture.
