

Is it good for grass to grow on photovoltaic panels

Overview

Situating solar panels on grasslands can boost grass growth by 20% on average—and as much as 90% in some areas—during dry periods. Let the best of Anthropocene come to you. In more detail, sunlight exposure becomes limited because solar panels greatly shade the ground beneath, creating a. Well, it turns out the choice of turf under photovoltaic arrays isn't just about aesthetics. Recent data from the 2024 SolarFarm Optimization Report shows 63% of solar installations experience reduced efficiency due to poor ground cover management. The real issue. Solar arrays can redirect rain to the edge of panels and offer shade to plants growing beneath them. And while the grass under your trampoline grows by itself, researchers like me in the field of solar photovoltaic technology — made up of solar cells that convert sunlight directly.
