

Is it safe to install solar panels on rooftops for solar power generation

Overview

Let's clear the air — the overwhelming consensus among scientists and engineers is that solar panels are generally safe. While myths around solar panel radiation risk circulate online, there is no evidence proving that rooftop solar systems cause harm to people living underneath. Solar panels offer a compelling mix of environmental benefits and financial incentives. These systems convert sunlight directly into electrical energy through photovoltaic cells, providing clean, renewable power. And while the term “radiation” can be alarming, solar panel EMFs are considered non-ionizing, safe, and not all that different from those produced by power lines, hair dryers, microwaves, TVs, radios, and WiFi routers. Professional installers ensure they're securely mounted, using roof-friendly methods to avoid leaks or structural issues. In this case, if solar panels produce excess electricity, it feeds back to the grid, earning credits through net metering. Since the roof is one of the most critical parts of the home, it's natural to want reassurance.
