

Is solar glass medium borosilicate

Overview

Traditional soda-lime glass, while common in many glass products, lacks this thermal resilience, making borosilicate the preferred choice in solar technology. Borosilicate glass is a type of glass with silica and boron trioxide as the main glass-forming constituents. A selective coating enhances energy absorption, 3. By adding a high proportion of boron oxide to silicon oxide, as an additional network former in a glass melt, borosilicate glass acquires several outstanding properties that make it ideal for demanding technical applications.

Borosilicate glass is a type of glass with silica and boron trioxide as the main glass-forming constituents. Borosilicate glasses are known for having very low coefficients of thermal expansion ($3 \times 10^{-6} \text{ K}^{-1}$ at 20°C), making them more resistant to thermal shock than any other common glass. Such glass is subjected to less thermal stress and can withstand temperature differentials of about 330°F (166°C) without fracturing. It is c...
