

# Is there something fishy about solar photovoltaic power generation

## Overview

---

By adopting solar power, fishing enterprises can reduce their reliance on fossil fuels and enhance their energy independence, thereby promoting more sustainable practices. It outlines key questions to keep in mind if you are considering solar arrays for a closed aquaculture system, and includes an example of a fish farm currently using PV power. Aquaculture is the cultivation of fish and aquatic animals and plants. Closed aquaculture systems need pumps and aerators. Solar photovoltaic (PV) generation is burgeoning as global economies pursue decarbonization goals. The synergistic opportunities for co-located aquaculture and renewable energy can thus provide a multifunctional use of space. In 2016, The International Renewable Energy Agency (IRENA) came up with a study that reveals that there were 250,000 metric tonnes of solar panel waste at the end of that year. Another study by the Electric Power Research Institute (EPRI) concluded that the disposal of solar panels is a major issue.
