

Jordan energy independence

Overview

AMMAN — Jordan's energy sector has made “remarkable” progress over the past two decades, thanks to strategic investments and policy reforms aimed at achieving energy independence and sustainability. The Ministry of Energy and Mineral Resources on Saturday says that total investments in the energy sector between 1999 and 2023 amounted to around \$10 billion, including \$2. Jordan is setting its sights on a big leap in natural gas production. The National Petroleum Company (NPC) has laid out an ambitious plan to bump up daily output to 418. This period has seen Jordan navigate through its resource limitations to emerge as a leader in renewable energy in the region, make significant advances in the natural gas and oil shale sectors, and unlock the potential of its vast mineral resources. Israel's war in Gaza has presented Jordan with a pressing conundrum. The resource-starved kingdom's lack of fossil fuels has long forced it to rely heavily on. The energy sector is a dynamic and fast changing part of our economy, and Jordan Energy seeks to build long-term customer relationships.
