

Latvian government subsidies for energy storage equipment

Overview

Given the interest of residents in purchasing electricity-producing equipment, the Ministry of Climate and Energy (KEM) has expanded the support program and in the future residents will be able to get state aid for the purchase of electricity storage facilities as well, the. Given the interest of residents in purchasing electricity-producing equipment, the Ministry of Climate and Energy (KEM) has expanded the support program and in the future residents will be able to get state aid for the purchase of electricity storage facilities as well, the. Given the interest of residents in purchasing electricity-producing equipment, the Ministry of Climate and Energy (KEM) has expanded the support program and in the future residents will be able to get state aid for the purchase of electricity storage facilities as well, the Ministry said Friday. As Latvia strengthens its commitment to renewable energy and energy independence, an increasing number of government-backed subsidies and loan programs are available in 2025 for households and businesses investing in solar panels, wind energy, heat pumps, and energy efficiency improvements. This means more electricity production and less energy loss. Inverter efficiency generally ranges from 90% to 98%. [pdf] The proposed project will combine wind, solar, battery energy storage and green hydrogen to. Government regulations set the method of how the support level is calculated for each RES technology. Feed-in tariffs are paid for a period of 20 years A reduced feed-in tariff rate is stipulated for the operators of renewable electricity plants. Local authorities are responsible for municipal energy supply and renewable energy projects, with Latvia's energy transition guided by the National Energy and Climate Plan and the Energy Strategy 2050.
