

Leading salt-molten energy storage system

Overview

The large-scale renewable energy storage sphere is set to get a massive boost with the development of a 1 GWh molten salt storage system, which will be capable of powering approximately 100,000 homes for 10 hours with an efficiency of up to 90%. That is why MAN Energy Solutions has developed the molten salt energy storage system, or MOSAS. These salts become electrically conductive when heated above their melting point, typically between 200°C and 600°C depending on the chemistry., by direct irradiation of sunlight through a solar receiver. Molten Salt Technology Thermal Energy Storage represents a cutting-edge method for storing thermal energy.
