

Liechtenstein reduced carbon emissions

Overview

By committing to reducing carbon emissions by 40% compared to 1990 levels, the country aims to mitigate the effects of a warming planet. Efforts are also being made to promote environmentally friendly agriculture as part of their strategy. In 2022, the country updated the associated legal acts in 2023. The Climate Strategy 2050 provides an overall vision on the reduction of greenhouse gas emissions in Liechtenstein until the middle of the century, so to achieve net-zero emissions by the middle of the century. To achieve this, domestic. This interactive chart shows the breakdown of annual CO₂ emissions by source: either coal, oil, gas, cement production or gas flaring. This breakdown is strongly influenced by the energy mix of a given country, and changes as a country shifts to or from a given energy source. With its unique geographical characteristics, including mountainous terrain and a temperate climate, the nation. Liechtenstein emitted 0.
