

# Low-temperature server racks for office buildings

## Overview

---

Components such as Tripp Lite wall mount enclosures and UPS systems can enhance rack-level temperature control. Open rack designs allow for easier heat dissipation and simplify maintenance tasks. The Cruxial-Cool-42u Air Conditioned Server Rack is a 19" wide, 42u server rack featuring a rackmount 9k BTU air conditioning unit with remote monitoring and management. Cool your hot equipment in our most popular Cruxial Server Rack. Even when outdoor temperatures plummet below freezing, the sensitive equipment inside continues to produce heat 24/7. They house the powerful computing machines that keep businesses, websites, and cloud services running 24/7. Managing that heat through efficient server rack cooling is essential not just for. Higher data transfer speeds, low latency, and constant availability require more computing power, which in turn means higher power densities per rack. For your unique performance requirements to be achieved, the servers in the rack must operate at peak capacity and within the optimum temperature.
