In officially connecting to the grid, it's become China's first data center microgrid to adopt an intelligent management model that integrates wind power, solar power, battery storage and load, overcoming a significant challenge in bridging renewable energy with expanding. Together, they form a self-sufficient microgrid that generates nearly 7 million kilowatt-hours of electricity annually -- enough to power the entire park. "This clean energy solution replaces 2,800 tonnes of coal consumption while cutting carbon emissions by about 7,500 tonnes every year," said. In Xuzhou, Jiangsu Province, a new energy vehicle industrial park features a 52,000-square-meter array of photovoltaic panels integrated with an energy storage system, forming a self-sufficient microgrid. This cutting-edge system combined solar power with small-scale battery storage, setting a new benchmark for green energy in data centers. Less than a year later, we have achieved.
