Overview

Molten salt energy storage is an economical, highly flexible solution that provides long-duration storage for a wide range of power generation applications. MAN MOSAS uses renewable energy to heat liquid salt to 565 °C. It is then stored until needed. In concentrated solar power (CSP) facilities, this technique is utilized to store the heat that is captured from the sun during the day and use it to produce. AREVA is a French multinational nuclear energy company with a growing presence in renewable energy. The company has developed a proprietary molten salt TES technology called Thermatec. However, potential limitations may.
