

# Morocco s new energy storage policy will be released when

## Overview

---

It is scheduled to be put into operation between the end of 2025 and mid-2026. Morocco holds 71% of the world's phosphate reserves and is rich in cobalt resources, providing core raw materials for lithium iron phosphate and ternary batteries. Morocco's 2026 draft finance bill reinforces the country's long-term plan to expand renewable energy, launch major gas and hydrogen projects. Mohammed VI – Since launching its National Energy Strategy in 2009, Morocco has been working to raise the share of renewable energy to 52% of the installed. Morocco's complex energy landscape demonstrates how developing nations must navigate intricate regulatory frameworks while balancing industrial growth with environmental commitments. These systems, generally coupled with solar and wind. With 96% of its electricity demand met domestically in 2023 [1], Morocco isn't just playing the energy game; it's rewriting the rules. Morocco's 2024-2030 energy blueprint reads like a climate superhero's manifesto. On April 10, Morocco's Ministry of Energy Transition and Sustainable Development launched a call for expressions of interest to develop an integrated infrastructure for natural gas reception, storage, re-gasification, and transport, alongside a gas-fired power plant.
