

Nighttime solar power generation technology

Overview

They have developed a technology that enables solar panels to generate electricity even at night. This innovation uses a natural process called radiative cooling, where heat from the Earth's surface escapes into space on clear nights. How it works: Daytime generation - Solar panels absorb sunlight and transform it into DC (direct. At the University of New South Wales (UNSW), a team of researchers has made a significant breakthrough in solar technology by developing a device that can generate electricity from solar energy even after the sun has set. It is the transformation innovation for sustainable energy, especially for off-grid applications, at a very early stage.
