The module is considered to be in compliance with this standard only when the module is mounted in the manner specified by the mounting instructions. A module with exposed conductive the manufacturer's instructions and the requirements of the National. After solar energy arrays are installed, they must undergo operations and maintenance (O&M) to function properly and meet energy production targets over the lifecycle of the solar system and extend its life. Conducting regular O&M ensures optimal performance of photovoltaic (PV) systems while. An AC distribution board (ACDB) (also known as panel board, breaker panel, or electric panel) is present. The primary function of the ACDB is to serve as a control point to regulate all AC power to connected loads.
