Secure your solar setup with compact, DIN rail-mounted circuit breakers. These problems can cause fires or equipment failure. Always. A circuit breaker looks out for electrical current and turns it off when damage is imminent—think overloads, short circuits, or ground faults. On a solar installation, it safeguards your panels from burning up, your inverter from fire, and your home from fire danger. Using a breaker that is too small can cause it to trip constantly; one that is too large won't. Solar PV system protection uses circuit breakers, fuses, and surge protectors to stop equipment damage from electrical faults.
