

# Photovoltaic panel meltblown

## Overview

---

The short answer is yes, solar panels can melt snow, but several factors influence this process: 1. When sunlight hits the panels, they absorb some of that energy, which can raise their temperature above. The system removes snow and ice from solar panels ensuring their functioning. Installing solar panels, both for domestic and industrial use, is an important step towards a more sustainable and electric future, which aims at saving resources. Using solar energy can have a positive, indirect effect on the environment when solar energy replaces or reduces the use of other energy sources that have larger effects on the environment.
