

Photovoltaic power generation supporting energy storage

Overview

By integrating energy storage solutions, such as batteries, with PV systems, it becomes possible to store excess energy generated during peak sunlight hours for utilization during periods of low generation or high demand. The AES Lawai Solar Project in Kauai, Hawaii has a 100 megawatt-hour battery energy storage system paired with a solar photovoltaic system. Sometimes two is better than one. This conversion process occurs through the photovoltaic effect, wherein solar panels, composed of semiconductor materials, absorb solar. Energy storage technologies are critical for optimizing the use of solar energy, 2.
