

# Power generation from solar and wind

## Overview

---

A review by the SUN DAY Campaign of data released by the Federal Energy Regulatory Commission (FERC) reveals that the combination of solar and wind accounted for 90% of new U. electrical generating capacity added in the first seven months of 2025. In our latest Short-Term Energy Outlook (STEO), we expect U. 6% in 2027, when it reaches an annual total of 4,423 BkWh. To study America's growing renewable electricity capacity and generation, Climate Central analyzed historical data on solar and wind energy over a 10-year period (2014 to 2023). The report also looks at retirements, planned retirements, and cancellations since 2017.

## Power generation from solar and wind

---

### Solar power generation drives electricity generation growth over the

We expect the combined share of generation from solar power and wind power to rise from about 18% in 2025 to about 21% in 2027. In our STEO forecast, utility-scale solar is the fastest ...

---

### Solar and Wind Power Has Grown Faster Than Electricity Demand ...

Worldwide solar and wind power generation has outpaced electricity demand this year, and for the first time on record, renewable energies combined generated more power than coal,

---

### Solar and wind are covering all new power demand in 2025

Solar and wind aren't just expanding; they're outpacing global electricity demand itself. Solar generation jumped 498 TWh (+31%) compared to the same period last year, already topping all

## America's Electricity Generating Capacity

The largest fuel source for this capacity is natural gas (42.7%), followed by coal (15%). Wind, nuclear, solar, and hydro together account for more than one-third of capacity. Solar continues to be the main ...

## What Generates More Power: Wind or Solar?

Wind and solar are two of the fastest-growing renewable energy sources in the world. But when comparing them, many consumers and homeowners ask the same question: Which generates ...

## A Decade of Growth in Solar and Wind Power: Trends Across the U.S.

This report uses data from the EIA to analyze solar and wind capacity and generation over the past decade (2014 to 2023) in all 50 states and the District of Columbia.

## How Is Electricity Generated? Complete Guide To Power Generation ...

Renewable Energy Dominance: In 2025, renewable sources account for 32% of global electricity generation, with solar and wind experiencing the fastest growth rates and achieving the ...

## Wind And Solar Energy: Global Electricity Generation 2024 , Low ...

Wind And Solar generates 15.3% of global electricity worldwide. Compare Wind And Solar power generation by country with 2024 data and environmental impact.

## US solar capacity overtakes wind - pv magazine International

Solar has become the largest renewable source of installed power capacity in the United States, surpassing wind after 27 consecutive months as the leading source of new grid additions, ...

## Solar and wind make up 90% of new US electricity capacity so far this ...

A review by the SUN DAY Campaign of data released by the Federal Energy Regulatory Commission (FERC) reveals that the combination of solar and wind accounted for 90% of new U.S. ...
