

# Renewable energy growth ethiopia

## Overview

---

Ethiopia has made notable progress in renewable energy over the past decade, with its installed capacity rising from 2.6% compound annual growth rate (CAGR), demonstrating the country's consistent expansion of its clean. Ethiopia stands at a critical juncture in its energy journey. While these goals offer tremendous opportunities, they also present significant. Addis Ababa, Febru(ENA)—As climate pressure, rapid population growth, and rising energy demand reshape the Horn of Africa, Ethiopia is positioning renewable electricity at the center of regional transformation. Ethiopia's capacity is higher than Nigeria's 3. The biggest surge occurred in 2017, with a 64.

Ethiopia has made notable progress in renewable energy over the past decade, with its installed capacity rising from 2.6 GW in 2015 to 6.0 GW in 2024. This growth represents an 8.6% compound ...

## Renewable energy in Ethiopia

Overview  
Electricity supply  
Hydropower  
Wind power  
Solar Power  
Geothermal  
Biofuels  
Exports

In 2011, over 96% of Ethiopia's electricity was generated from hydropower. The country began a large program to expand electricity supply in the 2010s from 2,000 MW to 10,000 MW. This was to be done mainly with renewable sources. Wind and geothermal were included to offset seasonal differences in water levels. Ethiopia plans to export electricity to neighboring countries but the plan is contingent upon transmission lines being upgraded and expanded.

## National Roadmap for Scaling

## 12.8V 200Ah

## Up Productive Use of Renewable ...

Access to reliable and affordable energy is critical for Ethiopia's economic development, with a direct relationship to economic growth and eradicating poverty. Ethiopia's government recognizes the ...
