

Self-generated solar panels

Overview

Solar self-consumption allows households and businesses to directly use the energy generated by their solar panels, reducing dependence on the grid. Integrating photovoltaic (PV) production into building electrical distribution systems and using it to power the building loads is becoming more common for both new and existing buildings. However, the use of solar energy to power building installations raises still questions—you can get the answer. Self-consumption refers to producing and using the same electricity on-site. With net metering policies potentially shifting in coming years. At SCE, we are dedicated to helping you harness the power of the sun through our solar programs.
