

Solar inverter overvoltage protection

Overview

Overvoltage protection devices (surge protection devices, or SPD for short) generate equipotential bonding between the connected conductors when excessive voltage is applied. Properly installed surge protection can reduce the likelihood of permanent damage to inverter. Eaton offers the industry's most complete and reliable circuit protection for PV balance of system, from fuses, fuse holders and circuit breakers to safety switches and surge protection—allowing for comprehensive overcurrent and overvoltage protection anywhere in the PV system. Eaton offers a range. Without built-in solar inverter protection, you risk damaging the entire setup and compromising safety. First off, what's an over - voltage situation in a PV system?

Well, a photovoltaic system is all about converting sunlight into electricity.
