## Overview

---

In 1991, mass production of PV solar inverters began with the introduction of the SunPower SMA WR 1800. The Sunny Boy 700 was introduced five years later in 1995. Inverters are a crucial part of any solar power system, responsible for converting the direct current (DC) generated by solar panels into the alternating current (AC) that powers our homes and appliances. Here's an overview of its progression through the past, present, and potential future developments:

**Early Inverters:** In the early days of solar energy, solar inverters were basic. From their humble beginnings to the advanced technology we see today, solar inverters have undergone remarkable transformations to meet the growing energy demands of homes, businesses, and industries. Here's a brief look at its journey through the past, present, and future.
