

Solar photovoltaic power generation control circuit

Overview

In the present paper, a novel circuit, re-ferred to as the generation control circuit (GCC), which enables maximum power to be obtained from all of the PV modules even if some of the modules are prevented from receiving light. A Photovoltaic controller is one of the core components in a photovoltaic power generation system. Let's delve into the working principle of a Photovoltaic controller. The power circuit of power electronic interface comprises of a quadratic boost converter with voltage multiplier cell and (1-phi) voltage source inverter. The. At present, photovoltaic (PV) systems are taking a leading role as a solar-based renewa-ble energy source (RES) because of their unique advantages. Solar panels are formed by arranging solar cells or PV cells. Solar photovoltaic power system designs involve several components and developments to offer better performance and increased efficiency.
